

BridgeBreak – Web App Summary

Overview

BridgeBreak is a simple web-based client and project management application designed for small teams. It centralizes project handling, communication, payments, and internal finance tracking in a single admin-controlled system.

User Roles

Client:

- Create projects and submit requirements (text, GitHub links, voice notes, files)
- Track project status, deadlines, test assets, and deployment links
- Raise support requests and meeting requests
- View invoices, pending payments, and payment history
- Receive in-app notifications

Admin:

- Review and approve projects
- Set project cost and timelines
- Manage project status and deliverables
- Handle support and meetings
- Manage invoices and payments
- Track revenue and salary payouts
- Control all system settings

Project Flow

1. Client creates a project (Pending)
2. Admin reviews requirements and estimates cost
3. Optional meeting if required
4. Project moves to Accepted
5. Development updates shared inside the web app

Support & Meetings

- In-app chat or ticket-based support
- Support requests linked to projects
- Meeting requests and history stored in the system

Payments & Finance

- Client invoices and due dates visible in-app
- Pending payments show QR code or bank details
- Admin tracks revenue and salary expenses

Notifications

- All updates shown as in-app notifications only
- No email or external messaging

Purpose

BridgeBreak is a lightweight internal web tool built to simplify client project management while giving complete operational and financial control to the admin.
